

What is harmful blue light?

Blue light (also known as High Energy Visible Light) is at the far end of the visible spectrum, close to ultraviolet light, with a wavelength of between 380-460 nanometers. Harmful blue light is centered around 435nm¹.

Where is harmful blue light found?

Often associated exclusively with electronic devices and screens, harmful blue light is actually present both indoors and outdoors. The sun is the largest singular source of harmful blue light, scattering it through the atmosphere and emitting over 100 times the intensity of electronic devices and screens!

How do *Transitions* lenses help?

Delivering comfort of vision today and helping provide comprehensive protection for tomorrow, *Transitions* lenses block harmful UV and reduce exposure to harmful blue light indoors and outdoors so you can safely enjoy your vision today and in the future.

¹ Arnault et al., 2013, <http://dx.doi.org/10.1371/journal.pone.0071398>

Indoors, *Transitions* lenses filter harmful blue light emitted by artificial sources such as digital devices and LED lights.

Outdoors, they darken to help provide even more protection from harmful blue light, intense glare and UV rays from the sun.

Transitions® Signature®

Transitions® Signature® VII lenses block at least 20% of the harmful blue light indoors, which is up to 2 times more than standard clear lenses,² and they block over 85% outdoors.

**Blocks at least
20% indoors**
– up to 2X
more than a
clear lens²

**Blocks over
85%
outdoors**

Transitions® XTRActive®

Transitions® XTRActive® lenses help provide more protection than *Transitions Signature* VII lenses – they provide more protection against blue light everywhere you need it by blocking at least 34%³ of the harmful blue light indoors and 88% to 95% of harmful blue light outdoors.

**Blocks at least
34% indoors**
– up to 3X
more than a
clear lens³

**Blocks
88%-
95%
outdoors**

Transitions® Vantage®

Transitions® Vantage® lenses reduce exposure to harmful blue light, blocking at least 34% indoors, which is up to 3 times more than a standard clear lens,³ and over 85% outdoors.

**Blocks at least
34% indoors**
– up to 3X
more than a
clear lens³

**Blocks over
85%
outdoors**

²Transitions® lenses block 20% to 36% of harmful blue light indoors excluding CR607 Transitions® Signature® VII products which block 14% to 19%. The 2 times comparison refers to typical clear 1.50 and polycarbonate hard-coated lenses.

³Transitions® XTRActive® lenses and Transitions® Vantage® lenses block 34% to 36% of harmful blue light indoors excluding CR607 Transitions® XTRActive® products which block 27% to 31%. The 3 times comparison refers to typical clear 1.50 and polycarbonate hard-coated lenses.
